“Using occy has freed up 30% of my time, and I haven’t even used all the features yet!”

Katie Maloney
Internal Recruiter

Background

Our previous HR system wasn’t handling the recruitment process effectively enough. This meant we were **doing most of our processes manually**, using lots of spreadsheets, reminders, and administration.

We were managing multiple job boards, which meant our inboxes were overflowing with candidates and emails from different sources. We would then manually schedule interviews and screening actions, all of which took up a lot of time and resources.

We were also tracking costs and performance on spreadsheets.

How did you hear about occy?

I started to research all-in-one ATS and recruitment solutions and demoed a few platforms before deciding on occy.

What made occy stand out over other companies you considered working with?

The fact that the platform is **built specifically for volume hiring needs**. The time-saving features offered were also the biggest attraction.

How did you find the occy onboarding process? How did our team do?

Really good and smooth.

What have you been most impressed with? What are your favourite features?

The **automation workflows** have been a great way to keep candidates moving through the recruitment lifecycle, without the need to log in and manually update them. It’s saved us a lot of time at the front end.

The **job copywriting** has also been really helpful, as well as the **analytics** for our recruitment board reports.

What automation features have you used/enjoyed the most?

I’m going on holiday next week, and the triggers mean it still works to keep candidates moving.

What plans do you have to use occy in the future?

We plan to use more of the features offered as our Hiring Managers get more familiar with the platform.
